AACT Database

The Problem – Why is it Needed?

- There is currently a lack of accurate, quality controlled information on accessible programming, facilities and services available in the sport and recreation community.

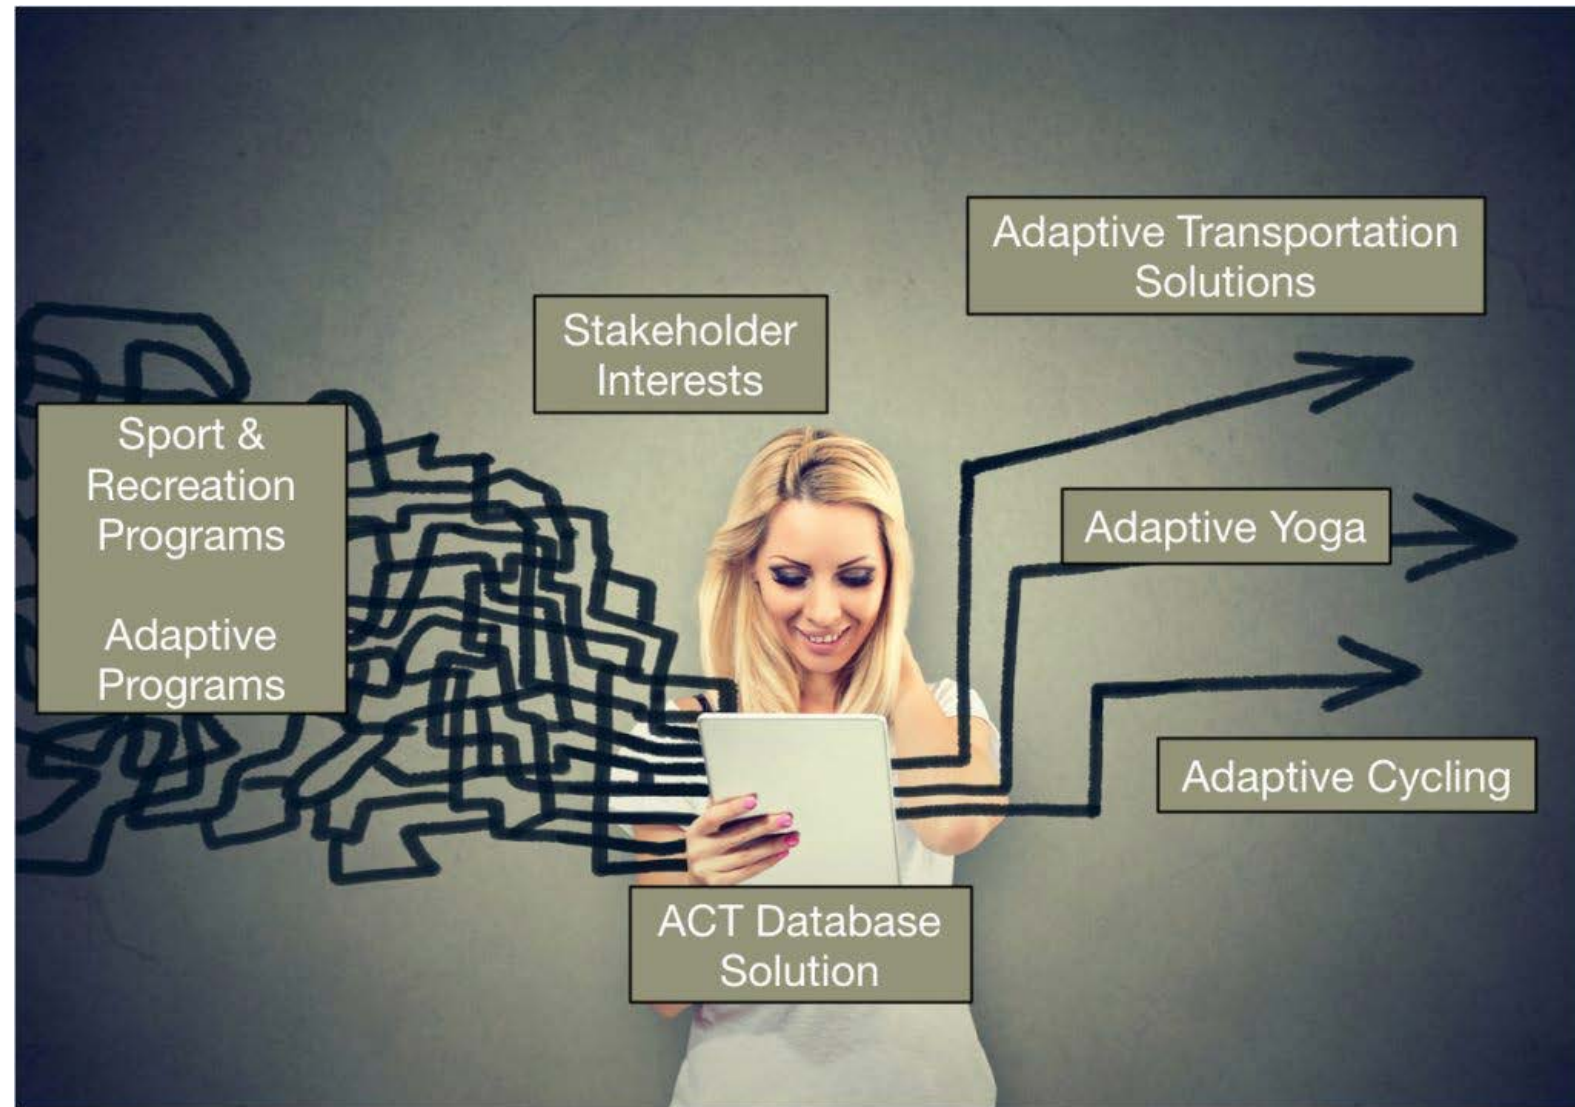

AACT DB - Who is the End User?

- Anyone interested in participation-based information related to accessible offerings, whether it is for a program, facility or service;
- Individuals possessing an adaptive need including physical, sensory, cognitive, emotional/social, and mobility challenged (aging seniors);
- Family, caregivers, friends;
- Service providers.

AACT DB Solution – What Is It?

- An online database resource that allows end users to find or provide information on accessible programming available in sport and recreation.

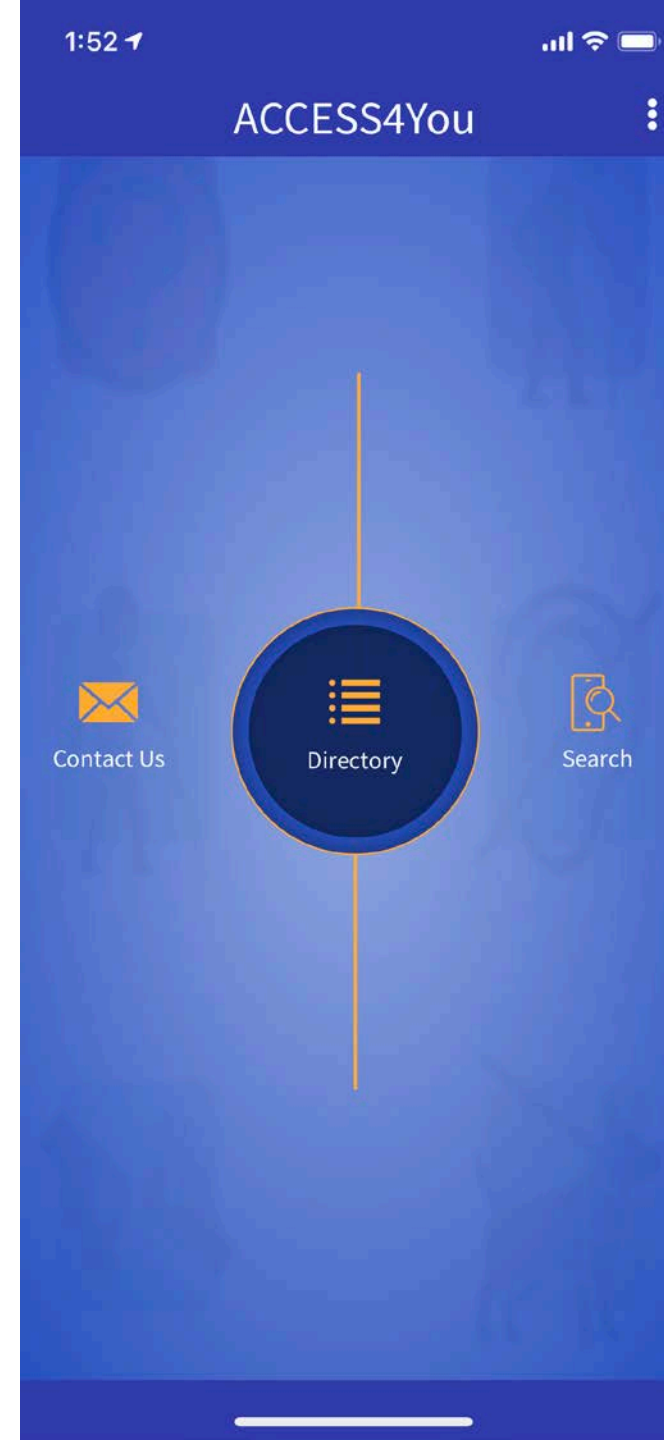

AACT DB Solution – Considerations

- A platform that ensures that the information provided is accurate and current;
- Corporate direction – provides capacity and resources to ensure data quality control/quality assurance, and sustainability of the database resource.

AACT DB Implementation

- An online cloud database resource
- Transition from a web only platform to a mobile access platform
- ACCESS4You App - available on Android, MacOS or web platforms

ACCESS4You Features

- Location based – Geospatial
- Geospatial query capable
- Searchable by Accessible Features
- Impairment accessibility to the information (audio feedback options, size adjustable)
- Multilingual: English, French, Cantonese, Spanish, German, others in planning

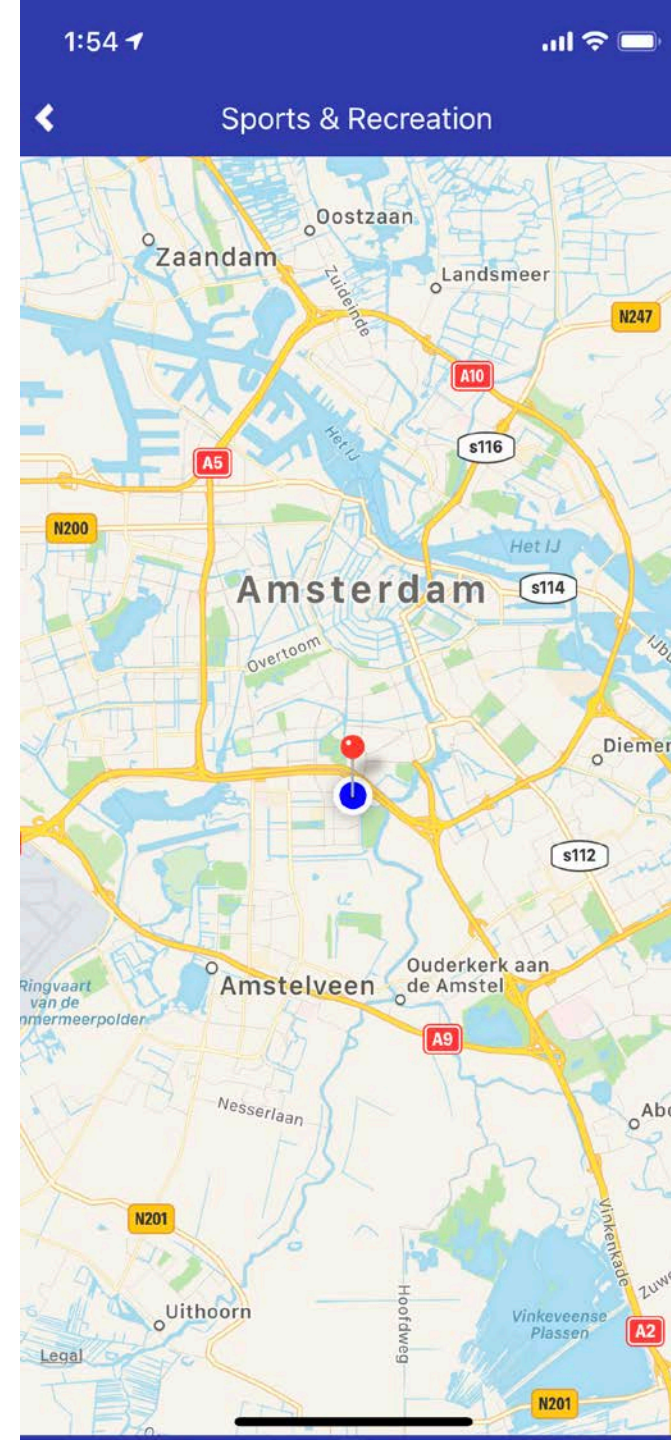

Image provided is in draft format; content, icons and layout to be finalized

ACCESS4You Scope

- Initially focused on Sport and Recreation
- Expanded to a multi-reach application
- The expanded focus increases the inclusivity of the ACCESS4You App – Access should be available to everyone

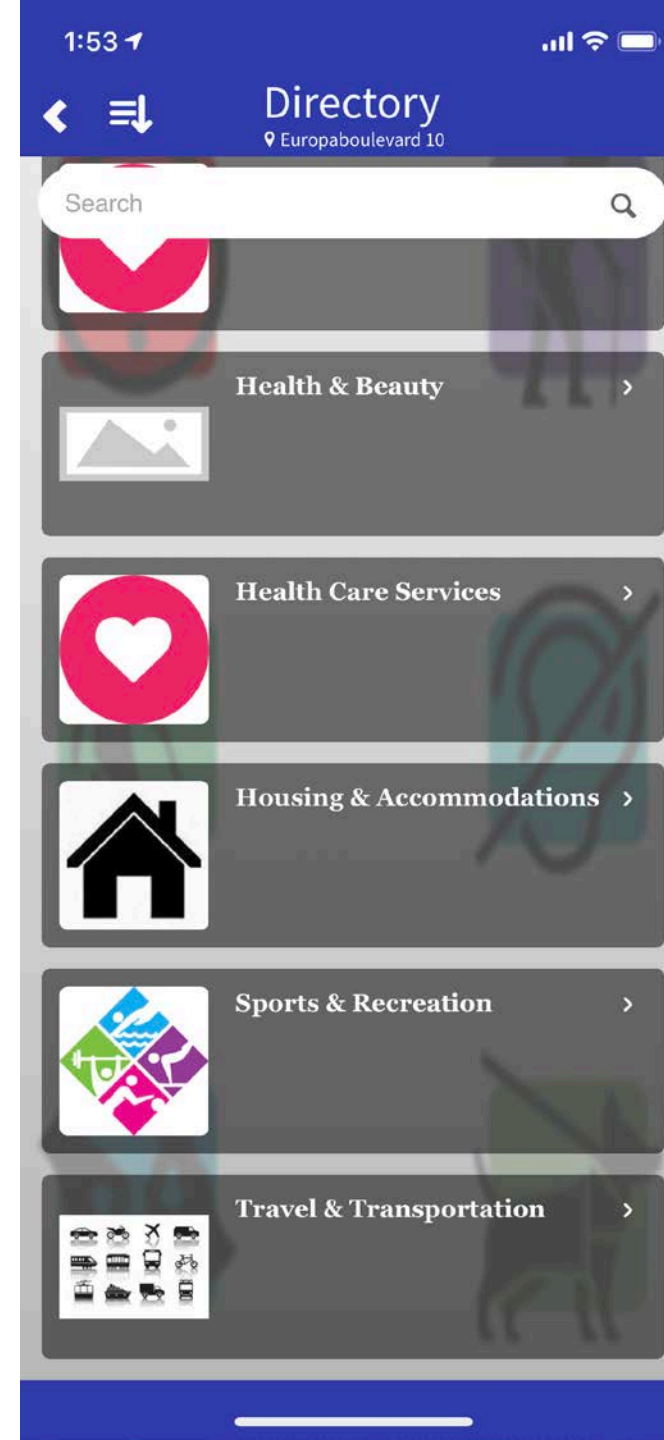

Image provided is in draft format; content, icons and layout to be finalized

ACCESS4You Entry

- User
- Key requirements:
 - User name and location by postcode
 - Provision of impairment or non-impairment
 - Allows the user to rank service providers on the provision of accessible services offered

ACCESS4You – Artificial Intelligence (AI)

- Efficiencies in determining gaps or redundancies in data;
- Matching requests related to the interests of the end user to specific service providers who meet those needs;
- Providing service providers a feedback loop on how they can improve their accessibility to benefit a broader user base (automated notifications);
- Provides geospatial gap assessments as to locations lacking accessible services in specific service areas, allowing service providers expansion options.

ACCESS4You– How Is It Sustainable?

- AMPED2PLAY Inc. Baseline Support
- Advertising availability
- Service provider product marketing
- Multi-year sponsorship options
- Availability: Canada October 2019, USA January 2020, other countries in planning for 2020.
